

An efficient workflow with reliable results to fulfill your needs in clinical diagnostics.

A winning team joining forces to deliver the best results

 **dynamicdevices**

 **repado**

Dynamic Devices and Repado have entered into a collaboration to provide advanced liquid handling solutions within the complex, regulated ecosystems of the IVDR and FDA.

When you combine award-winning liquid handling technologies, expert-regulated software development, and off-the-shelf products like Repado’s SWIS™ platform, you create the optimal partnership for both patients and healthcare professionals.

Dynamic Devices Lynx Liquid Handler: Featuring patented Volume Verified Pipetting (VVP) technology, it eliminates uncertainty in automated 96, 24, and 8 multi-channel liquid handling. With independent channel control, Lynx can reliably execute commonly performed pipetting routines in record time.

Repado: A certified software partner specialized in regulated Life Science and Healthcare applications. From concept to deployment, we deliver reliable and cost-effective solutions for B2C, B2B, M2M, and IoT applications, fully compliant with FDA, IVDR, TGA, and other global regulatory standards. Using our modular software package SWIS™, integrated with the Lynx Liquid Handler, Repado is offering tailor-made solutions for all business stakeholders.

Together, these innovations provide unmatched value and trust in clinical laboratory results.
