

UNLOCK THE FUTURE OF PROTEIN PURIFICATION!

Maglynx Protein Purification System

DISCOVER THE REVOLUTIONARY MAGLYNX PROTEIN PURIFICATION SYSTEM

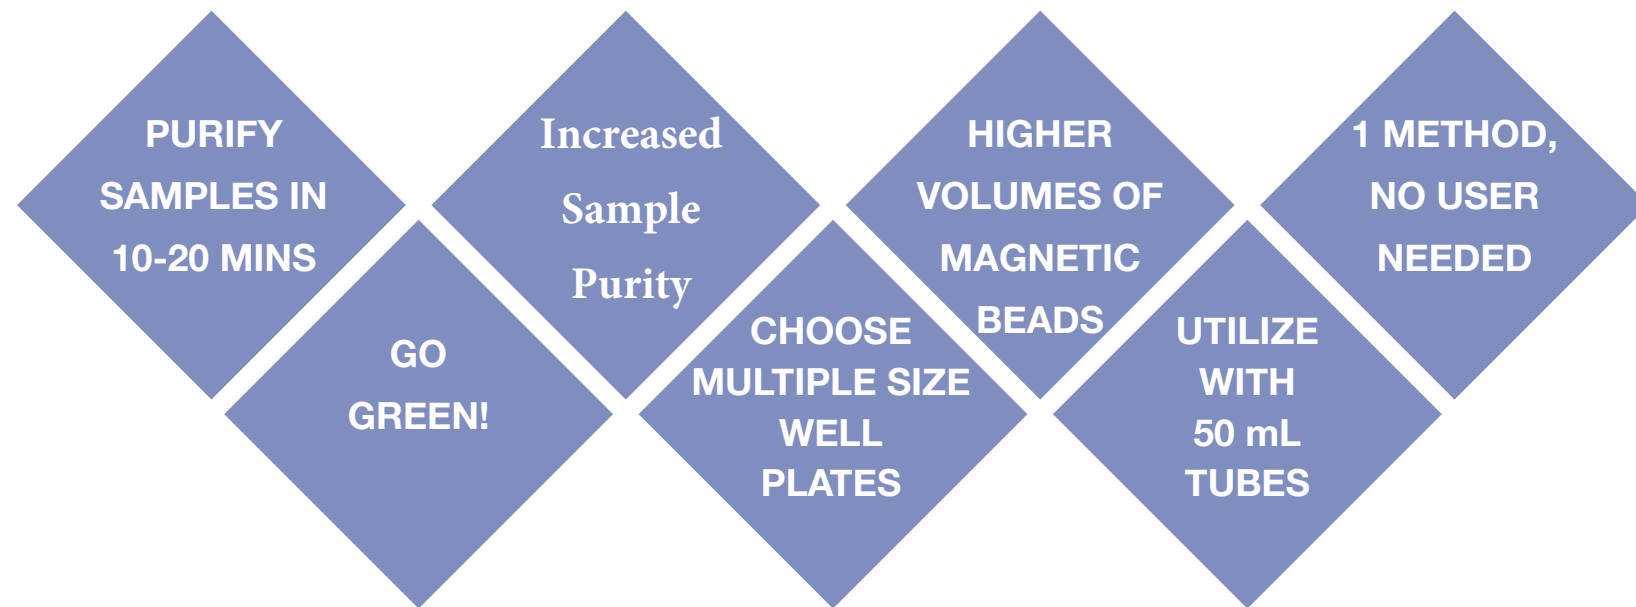

Are you ready to supercharge your protein purification processes? Dynamic Devices is proud to introduce the Maglynx Protein Purification System, a cutting-edge solution that will transform the way you purify samples. With the Maglynx System, you can expect:

- * **INCREASED THROUGHPUT:** Purify samples in just 10-20 minutes per plate, depending on system configuration and the use of polishing techniques. Say goodbye to time-consuming purifications!
- * **INCREASED YIELD POTENTIAL:** Achieve higher volumes of magnetic beads in your samples compared to conventional processes. Experience minimal bead loss in flow-through and wash steps.
- * **WALK-AWAY TIME:** Run multiple plates in a single method without constant user intervention. Maximize your lab's efficiency.
- * **EASE OF USE:** The intuitive user interface makes the system easy to operate. Perform functions such as error recovery with ease.
- * **INCREASED PURITY:** Sample polishing techniques improve screening grade molecule yields from traditional methods. Achieve purity quickly, saving you time.
- * **REDUCED PLASTIC USAGE:** Conserve consumables as the number of plates or tubes increases. Go green while maximizing your productivity.
- * **INPUT FLEXIBILITY:** Choose from 96-well, 24-well, 6-well plates, and 50 mL tube (2x3) formats. Tailor the system to your unique needs.

Experience the Power of Maglynx Protein Purification System

Dynamic Devices is committed to simplifying and optimizing your laboratory workflows. The Maglynx System is designed to meet the growing demand for increased throughput, improved yield potential, and simplified protein purification processes. Whether you're working with screening-grade molecules or conducting extensive research, the Maglynx System is your answer.
