

Liquid Handling Robot

INNOVATIVE PIPETTING TECHNOLOGY

Key Workflow Advantages

✓ **Volume Verified Pipetting (VVP®)**

Verify every sample. Detect insufficient volumes.

✓ **Independent Channel Control**

Control the volume & speed of each and every channel.

✓ **Fast Normalisation**

Complete a 96-well plate in under one minute.

✓ **Variable Viscosity Optimized Automatically**

Each channel's viscosity is independently calculated– no liquid class development needed.

✓ **Reliable Clog Detection & Correction**

Handle debris, clots, seeds, or swabs and improve processing rates.

✓ **Fast, Large-Volume Workflows with 5 mL 24 channel head**

Easily perform plasmid purification, whole blood transfer, and other challenging applications.

✓ **New Positive Pressure Extraction**

Integrated into the system; can target specific channels and register when a well has been fully evacuated
